

Our irreparable loss and a sad date

Six years ago, 09.02.2011 the great philosopher Valery Mikhailovich Kaitoukov passed away. He was the first who explained to the world the ugly nature of people in power in any human society which is united to survive under external pressure. He showed who and why get the power, how the power structure is developed from the beginning to an end and replacement, what role all participants with certain psychotypes play, what is the role and sad fate of some rare people, who are not involved in dictate, but who are the real driving force of history – that is contradictate passionaries, to whom undoubtedly VM Kaitoukov belong himself.

In contrast to piles of historical and contemporary papers (like "Staircase to Heaven" 2016), which praise and humbly help primates who are rushing to management, to the delighting pleasure of some authority, the philosophical treatise "Evolution of dictate" helps thinkers (as, for example, in work "Criticism of K. Marx" 2016 - <http://web.snauka.ru/issues/2016/11/73616>) to find their way in life and get rid of misconceptions and imposed unnecessary expectations.

In light of the "Evolution of dictate" the words of scientist V.S. Saveliev on power become quite apparent: "Power and money are needed for impunity to exercise maximum dominance, to have the most animal way of life and be not responsible for the consequences. Those simple biological purposes of the nouveau riche of all times and all nations are obvious and confirmed by long history of their own, and their descendants. It may seem, being a scion of the richest people allow them to be active in any kind of science, art or technology. Parents' capital will easily provide a curious teenager with realization of any creative imaginations, but it almost never happens. Among the thousands of descendants of the richest people in the world only a few are participating to something else other than the manic implementation of three basic instincts lightly decorated with humanitarian funds, gathering paintings, cars or diamonds. In this case, we have a clear demonstration of the primates' biological dream... In other words, one of the shining faces of the human brain poverty is that - any surplus of resources and opportunities can not cause the brain to engage in a reasonable and rational activities. It requires a special

design of creative or genius brain that can not be bought or trained. "S. V. Saveliev," "The Poverty of Brain " 2012 .

It is impossible to compensate the losses of the untimely death of V.M. Kaitoukov (http://osradio.ru/tema_dnia/33726-chelovek.html), but our and many future generations will be grateful to him for his fundamental philosophical work on dictate.
